Column to be used to flag Response Factor and %Diff/Drift values with an asterisk

* Values outside of QC limits

(1): Cal Type (Calibration Type): A = Average; L = Linear Regression; Q = Quadratic Regression

(2): % Diff (of Response Factors) reported when Cal Type = A; %Drift (of Conc) reported when Cal Type = L or Q

Notes and Definitions

B	Blank contamination. The analyte is greater than 1/2 the PQL/LOQ/CRQL in the associated method blank.
D	The reported value is from a dilution.
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration.
J	The reported value is an estimated value. Results are between the MDL and PQL/LOQ/CRQL.
U	The analyte was not detected and is reported as less than the LOD/MDL or as defined by the client.

Case Narrative

Sample Receipt

Work Order: 2107220
COC Number:
Default Cooler was received at 25 °C
Samples were checked for preservation. Where applicable, sample preservation was adjusted in the laboratory.

Requested Analysis

Method	Instrument
EPA-TO-15	MS-A1

Sample Qualifier Summary

There were no qualifiers for the samples.

Holding Times

All holding time requirements were met.

Method Blanks

There were no detections in the Method Blank(s).

Calibration

The Continuing Calibration Verification (CCV) recovery was not within established control limits.

Lab Number	Method	Analyte
2104713-CCV1	EPA-TO-15	1,2-Dibromo-3-chloropropane
2104713-CCV1	EPA-TO-15	2-Hexanone
2104713-CCV1	EPA-TO-15	Methyl isobutyl ketone
2104843-CCV1	EPA-TO-15	1,2-Dibromo-3-chloropropane
2104843-CCV1	EPA-TO-15	2-Hexanone

LCS / LCSD

The LCS recoveries were within QC limits.

Subject: Additional instructions - SMUD 59th Street SVE Pilot Study

Natalie-

Yesterday we submitted air samples to Mark Ellis – two separate COCs/work orders – that you will be receiving soon.

For the attached COC for the SMUD 59th Street SVE Pilot Study samples, we would like to add the following instructions:

- Please analyze the full TO-15 analyte list including naphthalene
- Please provide a CLP Report

Regards,

Andy Shepard

* Holding time not met

Note: If Prep or Analysis are performed within the hour (if holding time is based on hours) or within the day (if holding time is based on days), then the sample is not flagged as outside holding times. Calculated number of days are based on date received or date prepared depending on the test.

AECOM - Sacramento
2020 L St, Suite 400
Sacramento, CA 95811

Reported: 3/26/2021 10:47:41AM
Project: SMUD 59th St. SVM Air Sampling-CLP III
Project Number: 60632793.06
Project Manager: Andy Shepard

Notes and Definitions

B	Blank contamination. The analyte is greater than 1/2 the PQL/LOQ/CRQL in the associated method blank.
D	The reported value is from a dilution.
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration.
J	The reported value is an estimated value. Results are between the MDL and PQL/LOQ/CRQL.
U	The analyte was not detected and is reported as less than the LOD/MDL or as defined by the client.

Case Narrative

Sample Receipt

Work Order: 2018704
COC Number:
Cooler 2 was received at 3 °C
Cooler 3 was received at 3 °C
Cooler 4 was received at 3 °C
Default Cooler was received at 3 °C
Samples were checked for preservation. Where applicable, sample preservation was adjusted in the laboratory.

Requested Analysis

Method	Instrument
EPA-6020 (TTLC)	PE-EL4

Sample Qualifier Summary

There were no qualifiers for the samples.

Holding Times

All holding time requirements were met.

Method Blanks

There were no detections in the Method Blank(s).

Calibration

Initial calibration criteria for respective analysis were met. Frequency criteria for initial and continuing calibrations were met. Accuracy criteria for initial and continuing calibrations were met.

Matrix Spikes

Source Samples Used For QC

Batch	Method	Source Lab Number	Client Sample Name
B081467	EPA-6020 (TTLC)	2018704-10	B08-N-3
B081468	EPA-6020 (TTLC)	2018704-21	KA-44-S-1.5

Precision and accuracy requirements were within QC limits.

LCS

The LCS recoveries were within QC limits.

Post Spikes

The Post Spike recoveries were within QC limits.

Interference Checks

The Interference Check recoveries were within QC limits.

AECOM - Sacramento
2020 L St, Suite 400
Sacramento, CA 95811

Reported: 7/21/2020 1:12:57PM
Project: SMUD 59th St.-CLP III
Project Number: 60632763.5
Project Manager: Andy Shepard

Notes and Definitions

B	Blank contamination. The analyte is greater than 1/2 the PQL/LOQ/CRQL in the associated method blank.
D	The reported value is from a dilution.
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration.
J	The reported value is an estimated value. Results are between the MDL and PQL/LOQ/CRQL.
U	The analyte was not detected and is reported as less than the LOD/MDL or as defined by the client.

BC LABORATORIES, INC.

Case Narrative

Sample Receipt

Work Order: 2020984
COC Number:
Cooler 2 was received at 4 °C
Default Cooler was received at 4 °C
Samples were checked for preservation. Where applicable, sample preservation was adjusted in the laboratory.

Requested Analysis

Method	Instrument
EPA-6020 (TTLC)	PE-EL2

Sample Qualifier Summary

There were no qualifiers for the samples.

Holding Times

All holding time requirements were met.

Method Blanks

Lab Number	Method	Analyte		Concentration
B083042-BLK1	EPA-6020 (TTLC)	Arsenic	J	0.20575 mg/kg

Calibration

Initial calibration criteria for respective analysis were met. Frequency criteria for initial and continuing calibrations were met. Accuracy criteria for initial and continuing calibrations were met.

Matrix Spikes

Source Samples Used For QC

Batch	Method	Source Lab Number	Client Sample Name
B083042	EPA-6020 (TTLC)	2020984-04	KA-10-SS-1.5

Precision and accuracy requirements were within QC limits.

LCS

The LCS recoveries were within QC limits.

Post Spikes

The Post Spike recoveries were within QC limits.

Interference Checks

The Interference Check recoveries were within QC limits.

20-20984

Sacramento, CA 95811

Reported: 8/10/2020 12:38:06PM
Project: SMUD 59th St.-CLP III
Project Number: 60632763.5
Project Manager: Andy Shepard

Notes and Definitions

B	Blank contamination. The analyte is greater than 1/2 the PQL/LOQ/CRQL in the associated method blank.
D	The reported value is from a dilution.
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration.
J	The reported value is an estimated value. Results are between the MDL and PQL/LOQ/CRQL.
U	The analyte was not detected and is reported as less than the LOD/MDL or as defined by the client.

Case Narrative

Sample Receipt

Work Order: 2022938
COC Number:
Default Cooler was received at 3 °C
Samples were checked for preservation. Where applicable, sample preservation was adjusted in the laboratory.

Requested Analysis

Method	Instrument
EPA-6020 (TTLC)	PE-EL4

Sample Qualifier Summary

There were no qualifiers for the samples.

Holding Times

All holding time requirements were met.

Method Blanks

There were no detections in the Method Blank(s).

Calibration

Initial calibration criteria for respective analysis were met. Frequency criteria for initial and continuing calibrations were met. Accuracy criteria for initial and continuing calibrations were met.

Matrix Spikes

Source Samples Used For QC

Batch	Method	Source Lab Number	Client Sample Name
B084663	EPA-6020 (TTLC)	2022938-01	B08-3-N-1.5

Precision and accuracy requirements were within QC limits.

LCS

The LCS recoveries were within QC limits.

Post Spikes

The Post Spike recoveries were within QC limits.

Interference Checks

The Interference Check recoveries were within QC limits.

Discussion

EPA Method 6020 client requested sample 20-22938-03 was not used for QC sample.

Project: SMUD 59th St.-CLP III
Project Number: 60570043.5
Project Manager: Andy Shepard

Notes and Definitions

B	Blank contamination. The analyte is greater than 1/2 the PQL/LOQ/CRQL in the associated method blank.
D	The reported value is from a dilution.
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration.
J	The reported value is an estimated value. Results are between the MDL and PQL/LOQ/CRQL.
U	The analyte was not detected and is reported as less than the LOD/MDL or as defined by the client.

Case Narrative

Sample Receipt

Work Order: 2025110
COC Number:
Default Cooler was received at 2 °C
Samples were checked for preservation. Where applicable, sample preservation was adjusted in the laboratory.

Requested Analysis

Method	Instrument
EPA-6020 (TTLC)	PE-EL2

Sample Qualifier Summary

There were no qualifiers for the samples.

Holding Times

All holding time requirements were met.

Method Blanks

There were no detections in the Method Blank(s).

Calibration

Initial calibration criteria for respective analysis were met. Frequency criteria for initial and continuing calibrations were met. Accuracy criteria for initial and continuing calibrations were met.

Matrix Spikes

Source Samples Used For QC

Batch	Method	Source Lab Number	Client Sample Name
B086188	EPA-6020 (TTLC)	2025083-01	<Not Client Sample>

Precision and accuracy requirements were within QC limits.

LCS

The LCS recoveries were within QC limits.

Post Spikes

The Post Spike recoveries were within QC limits.

Interference Checks

The Interference Check recoveries were within QC limits.

Reported: 9/14/2020 1:06:14PM
Project: SMUD 59th St.-CLP III
Project Number: 60632763.5
Project Manager: Andy Shepard

Notes and Definitions

B	Blank contamination. The analyte is greater than 1/2 the PQL/LOQ/CRQL in the associated method blank.
D	The reported value is from a dilution.
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration.
J	The reported value is an estimated value. Results are between the MDL and PQL/LOQ/CRQL.
U	The analyte was not detected and is reported as less than the LOD/MDL or as defined by the client.

Case Narrative

Sample Receipt

Work Order: 2034585
COC Number:
Default Cooler was received at 2.5 °C
Samples were checked for preservation. Where applicable, sample preservation was adjusted in the laboratory.

Requested Analysis

Method	Instrument
EPA-6010B (STLC)	PE-OP3
EPA-6010B (TCLP)	PE-OP3
EPA-6020 (TTLC)	PE-EL2
EPA-7471A (TTLC)	CETAC3

Sample Qualifier Summary

The analyte in the Method Blank is greater than the laboratory PQL but the sample result is greater than 10 times the Method Blank.

Lab Number	Method	Analyte
2034585-01	EPA-6020 (TTLC)	Barium
2034585-02	EPA-6020 (TTLC)	Barium

Holding Times

All holding time requirements were met.

Method Blanks

Lab Number	Method	Analyte		Concentration
B093700-BLK1	EPA-6020 (TTLC)	Barium	B	0.39475 mg/kg
B093700-BLK1	EPA-6020 (TTLC)	Copper	J	0.11725 mg/kg
B093700-BLK1	EPA-6020 (TTLC)	Molybdenum	J	0.053000 mg/kg
B093700-BLK1	EPA-6020 (TTLC)	Nickel	J	0.22650 mg/kg
B093700-BLK1	EPA-6020 (TTLC)	Selenium	J	0.11875 mg/kg
B093809-BLK1	EPA-7471A (TTLC)	Mercury	J	0.056160 mg/kg

Analyte detected in the Method Blank at or above the PQL.

Lab Number	Method	Analyte
B093700-BLK1	EPA-6020 (TTLC)	Barium

Calibration

Initial calibration criteria for respective analysis were met. Frequency criteria for initial and continuing calibrations were met. Accuracy criteria for initial and continuing calibrations were met.

Matrix Spikes

Source Samples Used For QC

Batch	Method	Source Lab Number	Client Sample Name
B093700	EPA-6020 (TTLC)	2034585-01	VW-35-2
B093809	EPA-7471A (TTLC)	2034504-01	<Not Client Sample>
B094661	EPA-6010B (TCLP)	2035371-02	<Not Client Sample>
B094803	EPA-6010B (STLC)	2035420-01	<Not Client Sample>

The difference between duplicate readings is less than the quantitation limit.

Lab Number	Method	Analyte
B093700-DUP1	EPA-6020 (TTLC)	Beryllium
B093700-DUP1	EPA-6020 (TTLC)	Cadmium

The sample concentration was more than 4 times the spike level.

Lab Number	Method	Analyte
B093700-MS1	EPA-6020 (TTLC)	Lead
B093700-MS1	EPA-6020 (TTLC)	Zinc
B093700-MSD1	EPA-6020 (TTLC)	Barium

Matrix spike precision is not within the control limits.

Lab Number	Method	Analyte
B093700-MSD1	EPA-6020 (TTLC)	Copper

Matrix spike recovery(s) was(were) not within the control limits.

Lab Number	Method	Analyte

Case Narrative

To: Mark Ellis; Shepard, Andy (Sacramento); Kohlhardt, Robert
Subject: SMUD COC correction 11/23
Attachments: CoC- 11.23.20_1.pdf

Mark,

Please see attached CoC from earlier today. I didn't grab Bill before he left site. I forgot to include PCBs to the analyses list.
Please include PCBs by EPA method SW8082 to the existing list that includes TPH, Cam 17 metals, VOCs and SVOCs.

Thank you,

Lucy

Project: SMUD Soil Samples-CLP
Project Number: 60632793.6 SMUD SVM
Project Manager: Keegan George

Notes and Definitions

B	Blank contamination. The analyte is greater than 1/2 the PQL/LOQ/CRQL in the associated method blank.
D	The reported value is from a dilution.
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration.
J	The reported value is an estimated value. Results are between the MDL and PQL/LOQ/CRQL.
U	The analyte was not detected and is reported as less than the LOD/MDL or as defined by the client.

Case Narrative

Sample Receipt

Work Order: 2034585
COC Number:
Default Cooler was received at 2.5 °C
Samples were checked for preservation. Where applicable, sample preservation was adjusted in the laboratory.

Requested Analysis

Method	Instrument
EPA-8270C	MS-B2

Sample Qualifier Summary

The surrogate recovery for this compound was not within the control limits.

Lab Number	Method	Analyte
2034585-01	EPA-8270C	2,4,6-Tribromophenol (Surrogate)
2034585-02	EPA-8270C	2,4,6-Tribromophenol (Surrogate)

Holding Times

All holding time requirements were met.

Method Blanks

There were no detections in the Method Blank(s).
The internal standard on the sample was not within the control limits.

Lab Number	Method	Analyte
2104723-ICB1	EPA-8270C	Chrysene-d12 (IS)
2104723-ICB1	EPA-8270C	Perylene-d12 (IS)

Calibration

The relative standard deviation of the calibration curve response factors exceeds the control limit.

Lab Number	Method	Analyte
2103032-CAL	EPA-8270C	2-Naphthylamine

The correlation coefficient for the calibration was below the minmum control limit.

Lab Number	Method	Analyte
2103032-CAL	EPA-8270C	4,6-Dinitro-2-methylphenol

The relative standard deviation of the calibration curve response factors for a Calibration Check Compound (CCC) exceeds the control limit.

Lab Number	Method	Analyte
2103032-CAL	EPA-8270C	Pentachlorophenol

The Initial Calibration Verification (ICV) recovery is not within established control limits.

Lab Number	Method	Analyte
2104723-ICV1	EPA-8270C	2-Naphthylamine

The Continuing Calibration Verification (CCV) recovery was not within established control limits.

Lab Number	Method	Analyte
2021422-CCV1	EPA-8270C	4-Nitrophenol
2021592-CCV1	EPA-8270C	Benzidine
2021592-CCV1	EPA-8270C	Benzo[g,h,i]perylene
2021592-CCV1	EPA-8270C	2-Naphthylamine

Matrix Spikes

Source Samples Used For QC

Batch	Method	Source Lab Number	Client Sample Name
B094056	EPA-8270C	2034773-06	<Not Client Sample>

Precision and accuracy requirements were within QC limits.

LCS

The LCS recoveries were within QC limits.

Discussion

The CCC limit for Pentachlorophenol exceeded 20% limit. The linearity criteria is met.

To: Mark Ellis; Shepard, Andy (Sacramento); Kohlhardt, Robert
Subject: SMUD COC correction 11/23
Attachments: CoC- 11.23.20_1.pdf

Mark,

Please see attached CoC from earlier today. I didn't grab Bill before he left site. I forgot to include PCBs to the analyses list.
Please include PCBs by EPA method SW8082 to the existing list that includes TPH, Cam 17 metals, VOCs and SVOCs.

Thank you,

Lucy

Column to be used to flag Response Factor and %Diff/Drift values with an asterisk

* Values outside of QC limits for beginning CCVs. For ending CCVs, limit is 50.

(1): Cal Type (Calibration Type): A = Average; L = Linear Regression; Q = Quadratic Regression

(2): % Diff (of Response Factors) reported when Cal Type = A; %Drift (of Conc) reported when Cal Type = L or Q

2,4,5-Trichlorophenol	L	50000	47310	0.3888809	0.4223671		-5.4	20
2,4,6-Trichlorophenol	A	50000	46760	0.4139238	0.4360008		5.3	20

Column to be used to flag Response Factor and %Diff/Drift values with an asterisk

* Values outside of QC limits for beginning CCVs. For ending CCVs, limit is 50.

(1): Cal Type (Calibration Type): A = Average; L = Linear Regression; Q = Quadratic Regression

(2): % Diff (of Response Factors) reported when Cal Type = A; %Drift (of Conc) reported when Cal Type = L or Q

Project Manager: Keegan George

Notes and Definitions

B	Blank contamination. The analyte is greater than 1/2 the PQL/LOQ/CRQL in the associated method blank.
D	The reported value is from a dilution.
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration.
J	The reported value is an estimated value. Results are between the MDL and PQL/LOQ/CRQL.
U	The analyte was not detected and is reported as less than the LOD/MDL or as defined by the client.

Case Narrative

Sample Receipt

Work Order: 2034585
COC Number:
Default Cooler was received at 2.5 °C
Samples were checked for preservation. Where applicable, sample preservation was adjusted in the laboratory.

Requested Analysis

Method	Instrument
EPA-8082	GC-14

Sample Qualifier Summary

Surrogate is low due to matrix interference. Interference verified through second extraction/analysis.

Lab Number	Method	Analyte
2034585-02	EPA-8082	Decachlorobiphenyl (Surrogate)

Holding Times

All holding time requirements were met.

Method Blanks

There were no detections in the Method Blank(s).

Calibration

Initial calibration criteria for respective analysis were met. Frequency criteria for initial and continuing calibrations were met. Accuracy criteria for initial and continuing calibrations were met.

Matrix Spikes

Source Samples Used For QC

Batch	Method	Source Lab Number	Client Sample Name
B094172	EPA-8082	2032744-97	<Not Client Sample>

Precision and accuracy requirements were within QC limits.

LCS

The LCS recoveries were within QC limits.

To: Mark Ellis; Shepard, Andy (Sacramento); Kohlhardt, Robert
Subject: SMUD COC correction 11/23
Attachments: CoC- 11.23.20_1.pdf

Mark,

Please see attached CoC from earlier today. I didn't grab Bill before he left site. I forgot to include PCBs to the analyses list.
Please include PCBs by EPA method SW8082 to the existing list that includes TPH, Cam 17 metals, VOCs and SVOCs.

Thank you,

Lucy

Project Manager: Keegan George

Notes and Definitions

B	Blank contamination. The analyte is greater than 1/2 the PQL/LOQ/CRQL in the associated method blank.
D	The reported value is from a dilution.
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration.
J	The reported value is an estimated value. Results are between the MDL and PQL/LOQ/CRQL.
U	The analyte was not detected and is reported as less than the LOD/MDL or as defined by the client.

Sample Receipt

Work Order: 2034585
COC Number:
Default Cooler was received at 2.5 °C
Samples were checked for preservation. Where applicable, sample preservation was adjusted in the laboratory.

Requested Analysis

Method	Instrument
EPA-8015B/FFP	GC-19

Sample Qualifier Summary

Chromatogram not typical of diesel.

Lab Number	Method	Analyte
2034585-01	EPA-8015B/FFP	TPH - Diesel (FFP)
2034585-02	EPA-8015B/FFP	TPH - Diesel (FFP)

Chromatogram not typical of motor oil.

Lab Number	Method	Analyte
2034585-01	EPA-8015B/FFP	TPH - Hydraulic Oil / Motor Oil
2034585-02	EPA-8015B/FFP	TPH - Hydraulic Oil / Motor Oil

The surrogate recovery for this compound was not within the control limits.

Lab Number	Method	Analyte
2034585-01	EPA-8015B/FFP	Tetracosane (Surrogate)

Holding Times

All holding time requirements were met.

Method Blanks

There were no detections in the Method Blank(s).

Calibration

The surrogate recovery for this compound was not within the control limits.

Lab Number	Method	Analyte
2021464-CCV1	EPA-8015B/FFP	Tetracosane (Surrogate)
2021464-CCV2	EPA-8015B/FFP	Tetracosane (Surrogate)

Mark Ellis 20-34585

From: Mulvey, Lucy <lucy.mulvey@aecom.com>
Sent: Monday, November 23, 2020 3:30 PM
To: Mark Ellis; Shepard, Andy (Sacramento); Kohlhardt, Robert
Subject: SMUD COC correction 11/23
Attachments: CoC- 11.23.20_1.pdf

Mark,

Please see attached CoC from earlier today. I didn't grab Bill before he left site. I forgot to include PCBs to the analyses list.
Please include PCBs by EPA method SW8082 to the existing list that includes TPH, Cam 17 metals, VOCs and SVOCs.

Thank you,

Lucy

Notes and Definitions

B	Blank contamination. The analyte is greater than 1/2 the PQL/LOQ/CRQL in the associated method blank.
D	The reported value is from a dilution.
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration.
J	The reported value is an estimated value. Results are between the MDL and PQL/LOQ/CRQL.
U	The analyte was not detected and is reported as less than the LOD/MDL or as defined by the client.

Case Narrative

Sample Receipt

Work Order: 2034585
COC Number:
Default Cooler was received at 2.5 °C
Samples were checked for preservation. Where applicable, sample preservation was adjusted in the laboratory.

Requested Analysis

Method	Instrument
EPA-8260B	MS-V17

Sample Qualifier Summary

There were no qualifiers for the samples.

Holding Times

All holding time requirements were met.

Method Blanks

There were no detections in the Method Blank(s).

Calibration

The Initial Calibration Verification (ICV) recovery is not within established control limits.

Lab Number	Method	Analyte
2021261-ICV1	EPA-8260B	Dichlorodifluoromethane
2021261-ICV1	EPA-8260B	1,1-Dichloroethene

The Continuing Calibration Verification (CCV) recovery was not within established control limits.

Lab Number	Method	Analyte
2021261-CCV3	EPA-8260B	Total Purgeable Petroleum Hydrocarbons
2021261-CCV6	EPA-8260B	Total Purgeable Petroleum Hydrocarbons

Matrix Spikes

Source Samples Used For QC

Batch	Method	Source Lab Number	Client Sample Name
B093879	EPA-8260B	2034722-50	<Not Client Sample>

Precision and accuracy requirements were within QC limits.

LCS

The LCS recoveries were within QC limits.

Discussion

For sequence 2021261- the ending CCV6 flag listed above is irrelevant. The CCV acceptance criteria is based on 20% forbeginning CCV and 50% for the ending CCV.
For sequence 2021261 regular Initial calibration standards curve and second source ICV standard were analyzed on 11/30/2020. The second source ICV standard had failed for Dichlorodifluoromethane and 1,1-Dichloroethene. The confirmation second source ICV standard was not reanalyzed.

Mark Ellis 20-34585

From: Mulvey, Lucy <lucy.mulvey@aecom.com>
Sent: Monday, November 23, 2020 3:30 PM
To: Mark Ellis; Shepard, Andy (Sacramento); Kohlhardt, Robert
Subject: SMUD COC correction 11/23
Attachments: CoC- 11.23.20_1.pdf

Mark,

Please see attached CoC from earlier today. I didn't grab Bill before he left site. I forgot to include PCBs to the analyses list.
Please include PCBs by EPA method SW8082 to the existing list that includes TPH, Cam 17 metals, VOCs and SVOCs.

Thank you,

Lucy

SMUD - Kleinfelder
6201 S Street/P.O. Box 15830
Sacramento, CA 95852-0830

Reported: 3/31/2021 4:48:58PM
Project: SMUD Soil Samples-CLP
Project Number: 60632793.6 SMUD SVM
Project Manager: Keegan George

Notes and Definitions

B	Blank contamination. The analyte is greater than 1/2 the PQL/LOQ/CRQL in the associated method blank.
D	The reported value is from a dilution.
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration.
J	The reported value is an estimated value. Results are between the MDL and PQL/LOQ/CRQL.
U	The analyte was not detected and is reported as less than the LOD/MDL or as defined by the client.

Date of Report: 12/04/2020

Case Narrative

Summary of Flags

A02	The difference between duplicate readings is less than the quantitation limit.
A03	The sample concentration was more than 4 times the spike level.
A10	Detection and quantitation limits were raised due to matrix interference.
A20	Surrogate is low due to matrix interference. Interference verified through second extraction/analysis.
A52	Chromatogram not typical of diesel.
A57	Chromatogram not typical of motor oil.
Q03	Matrix spike recovery(s) was(were) not within the control limits.

Subject: RE: CLP 2034758

Natalie,

No CLP is necessary. This work is being performed for SMUD. The sampler incorrectly listed AECOM as the client. The client should be SMUD. Keegan George is the SMUD project manager. Please send invoice to SMUD.

Thanks,

Robert Kohlhardt

Sacramento, CA 95852-0830

Reported: 12/04/2020 16:12
Project: SMUD Soil Samples
Project Number: 60632793 SMUD 59th St.
Project Manager: Keegan George

Notes And Definitions

J	Estimated Value (CLP Flag)
MDL	Method Detection Limit
ND	Analyte Not Detected
PQL	Practical Quantitation Limit
A02	The difference between duplicate readings is less than the quantitation limit.
A03	The sample concentration was more than 4 times the spike level.
A10	Detection and quantitation limits were raised due to matrix interference.
A20	Surrogate is low due to matrix interference. Interference verified through second extraction/analysis.
A52	Chromatogram not typical of diesel.
A57	Chromatogram not typical of motor oil.
Q03	Matrix spike recovery(s) was(were) not within the control limits.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.
All results listed in this report are for the exclusive use of the submitting party. BC Laboratories, Inc. assumes no responsibility for report alteration, separation, detachment or third party interpretation.

Notes And Definitions

CCV	Continuing Calibration Verification
ICV	Initial Calibration Verification
J	Estimated Value (CLP Flag)
MDL	Method Detection Limit
ND	Analyte Not Detected
PQL	Practical Quantitation Limit
A01	Detection and quantitation limits are raised due to sample dilution.
A02	The difference between duplicate readings is less than the quantitation limit.
A03	The sample concentration was more than 4 times the spike level.
A10	Detection and quantitation limits were raised due to matrix interference.
A20	Surrogate is low due to matrix interference. Interference verified through second extraction/analysis.
A52	Chromatogram not typical of diesel.
A57	Chromatogram not typical of motor oil.
Q01	Sample precision is not within the control limits.
Q03	Matrix spike recovery(s) was(were) not within the control limits.
S09	The surrogate recovery for this compound was not within the control limits.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Case Narrative

Sample Receipt

Work Order: 2037454
COC Number:
Default Cooler was received at 2.3 °C
Samples were checked for preservation. Where applicable, sample preservation was adjusted in the laboratory.

Requested Analysis

Method	Instrument
EPA-6020 (TTLC)	PE-EL2

Sample Qualifier Summary

There were no qualifiers for the samples.

Holding Times

All holding time requirements were met.

Method Blanks

There were no detections in the Method Blank(s).

Calibration

Initial calibration criteria for respective analysis were met. Frequency criteria for initial and continuing calibrations were met. Accuracy criteria for initial and continuing calibrations were met.

Matrix Spikes

Source Samples Used For QC

Batch	Method	Source Lab Number	Client Sample Name
B096009	EPA-6020 (TTLC)	2037644-12	<Not Client Sample>

Sample precision is not within the control limits.

Lab Number	Method	Analyte
B096009-DUP1	EPA-6020 (TTLC)	Arsenic

LCS

The LCS recoveries were within QC limits.

Post Spikes

The Post Spike recoveries were within QC limits.

Interference Checks

The Interference Check recoveries were within QC limits.

Reported: 1/4/2021 12:48:20PM
Project: SMUD 59th St.-CLP III
Project Number: 60632793.6
Project Manager: Andy Shepard

Notes and Definitions

B	Blank contamination. The analyte is greater than 1/2 the PQL/LOQ/CRQL in the associated method blank.
D	The reported value is from a dilution.
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration.
J	The reported value is an estimated value. Results are between the MDL and PQL/LOQ/CRQL.
U	The analyte was not detected and is reported as less than the LOD/MDL or as defined by the client.

Case Narrative

Sample Receipt

Work Order: 2037618
COC Number:
Cooler 2 was received at 4 °C
Default Cooler was received at 4 °C
Samples were checked for preservation. Where applicable, sample preservation was adjusted in the laboratory.

Requested Analysis

Method	Instrument
EPA-6020 (TTLC)	PE-EL2

Sample Qualifier Summary

There were no qualifiers for the samples.

Holding Times

All holding time requirements were met.

Method Blanks

There were no detections in the Method Blank(s).

Calibration

Initial calibration criteria for respective analysis were met. Frequency criteria for initial and continuing calibrations were met. Accuracy criteria for initial and continuing calibrations were met.

Matrix Spikes

Source Samples Used For QC

Batch	Method	Source Lab Number	Client Sample Name
B096199	EPA-6020 (TTLC)	2037618-04	WB07-1.5-MS/MSD

Precision and accuracy requirements were within QC limits.

LCS

The LCS recoveries were within QC limits.

Post Spikes

The Post Spike recoveries were within QC limits.

Interference Checks

The Interference Check recoveries were within QC limits.

AECOM - Sacramento
2020 L St, Suite 400
Sacramento, CA 95811

Reported: 1/6/2021 4:18:00PM
Project: SMUD 59th St.-CLP III
Project Number: 60632793.6
Project Manager: Andy Shepard

Notes and Definitions

B	Blank contamination. The analyte is greater than 1/2 the PQL/LOQ/CRQL in the associated method blank.
D	The reported value is from a dilution.
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration.
J	The reported value is an estimated value. Results are between the MDL and PQL/LOQ/CRQL.
U	The analyte was not detected and is reported as less than the LOD/MDL or as defined by the client.

Holding Times

All holding time requirements were met.

Method Blanks

There were no detections in the Method Blank(s).

Calibration

Initial calibration criteria for respective analysis were met. Frequency criteria for initial and continuing calibrations were met. Accuracy criteria for initial and continuing calibrations were met.

Matrix Spikes

Source Samples Used For QC

Batch	Method	Source Lab Number	Client Sample Name
B101942	EPA-8015B/FFP	2106339-06	VW-35-W-2

Precision and accuracy requirements were within QC limits.

LCS

The LCS recoveries were within QC limits.

Notes and Definitions

B	Blank contamination. The analyte is greater than 1/2 the PQL/LOQ/CRQL in the associated method blank.
D	The reported value is from a dilution.
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration.
J	The reported value is an estimated value. Results are between the MDL and PQL/LOQ/CRQL.
U	The analyte was not detected and is reported as less than the LOD/MDL or as defined by the client.

Case Narrative

Sample Receipt

Work Order: 2106339
COC Number:
Default Cooler was received at 5.4 °C
Samples were checked for preservation. Where applicable, sample preservation was adjusted in the laboratory.

Requested Analysis

Method	Instrument
EPA-6020 (TTLC)	PE-EL4

Sample Qualifier Summary

There were no qualifiers for the samples.

Holding Times

All holding time requirements were met.

Method Blanks

There were no detections in the Method Blank(s).

Calibration

Initial calibration criteria for respective analysis were met. Frequency criteria for initial and continuing calibrations were met. Accuracy criteria for initial and continuing calibrations were met.

Matrix Spikes

Source Samples Used For QC

Batch	Method	Source Lab Number	Client Sample Name
B101595	EPA-6020 (TTLC)	2106339-06	VW-35-W-2
B101596	EPA-6020 (TTLC)	2106339-20	WB11-5

Precision and accuracy requirements were within QC limits.

LCS

The LCS recoveries were within QC limits.

Post Spikes

Post spike recovery was not within the control limits.

Lab Number	Method	Analyte
B101595-PS1	EPA-6020 (TTLC)	Arsenic
B101595-PS1	EPA-6020 (TTLC)	Lead

Interference Checks

The Interference Check recoveries were within QC limits.

QC Out Of Limits

Measurement Type	Analyte	Mass	Out of Limits Message

AECOM - Sacramento
2020 L St, Suite 400
Sacramento, CA 95811

Reported: 3/19/2021 12:16:31PM
Project: SMUD 59th St.-CLP III
Project Number: 60632793.6
Project Manager: Andy Shepard

Notes and Definitions

B	Blank contamination. The analyte is greater than 1/2 the PQL/LOQ/CRQL in the associated method blank.
D	The reported value is from a dilution.
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration.
J	The reported value is an estimated value. Results are between the MDL and PQL/LOQ/CRQL.
U	The analyte was not detected and is reported as less than the LOD/MDL or as defined by the client.

Appendix E

Human Health Risk Assessment for the Vapor Intrusion Pathway

Human Health Risk Assessment for the Vapor Intrusion Pathway

E.1 Introduction

Presented herein is the human health risk assessment (HHRA) for the Sacramento Municipal Utility District (SMUD) 59th Street Corporation Yard (Site). The Site encompasses 19.74 acres in an area of varied land use. Residential neighborhoods are situated to the west, commercial developments are situated to the north, and United States Highway 50 is located south of the Site. A California Department of Transportation laboratory is located east of the Site. The SMUD headquarters and other buildings are located southeast of the Site. The yard is bisected by a Sacramento Regional Transit light rail line.

The Site has served as a central storage area for hazardous and non-hazardous wastes generated on-site and at off-site SMUD facilities/sites. Eight permanent buildings are present on-Site including an office building, inventory warehouse, tool issue warehouse, vehicle maintenance garage, shops building, hazardous materials building, salvage building, and a pre-fabrication building. In addition, there are areas for storage of new and refurbished electrical transformers, power poles, power cable, and hazardous wastes. However, since the relocation of SMUD's equipment yard to the East Campus Operations Center, the Site was subsequently used for office space and warehouse storage.

E.1.1 Previous Site Investigation Results

During a Resource Conservation and Recovery Act (RCRA) Facility Assessment, the California Department of Toxic Substances Control (DTSC) identified 19 solid waste management units (SWMUs) and two areas of concern (AOCs) where there was potential for past releases of hazardous waste or hazardous constituents (DTSC, 2012). After evaluating these SWMUs and AOCs, DTSC recommended that vehicle oil/water separator #1 (SWMU #1), vehicle oil/water separator #2 (SWMU #18), and the utility pole storage area (AOC #2) be included in a RCRA Facility Investigation and that no further RCRA corrective action was recommended for the other SWMUs and AOC. The utility pole storage area and vehicle oil/water separators have since been investigated and no significant contamination was identified. Underground storage tanks (USTs) formerly located on Site stored Stoddard solvent, waste oil, kerosene, gasoline, diesel, transmission fluid, motor oil, hydraulic oil, transformer oil, and waste transformer oil. No significant releases of the UST contents are known to have occurred.

A soil, groundwater, and soil vapor investigation was conducted at the Site in 2018 and 2019. The investigation findings were documented in a Site Characterization Report (SCR) (AECOM, 2019) that included a comparison of the soil, groundwater, and soil vapor analytical data to screening levels (SLs) considered protective of residential and commercial/industrial worker exposure scenarios.

Potential exposure routes for soil included inhalation of soil particulates and direct contact via incidental ingestion and dermal contact. The majority of the Site is covered with buildings and pavement; therefore, current Site workers were unlikely to be exposed to soil at the Site unless they are involved in landscape maintenance in unpaved areas or construction activities involving excavation, trenching, or pavement removal. Site personnel engaging in activities that could result in inhalation of soil particulates or direct soil contact can minimize their potential risk by reducing dust generation, wearing personal protective equipment, and following good sanitation practices. The SCR included a corrective action recommendation to address arsenic concentrations in soil above naturally-occurring (background) concentrations.

Ingestion and dermal contact were identified as potential groundwater exposure routes in the SCR. Groundwater is located at approximately 35 feet below ground surface (bgs) and there are no water wells located on Site; therefore, groundwater exposure pathways are currently incomplete for Site workers. The SCR reported that concentrations of tetrachloroethene (PCE), cobalt, copper, nickel, silver, and vanadium in groundwater were above residential and commercial/industrial direct contact SLs but below the maximum contaminant levels (United Stated Environmental Protection Agency [USEPA], 2018), if established; therefore, the concentrations in groundwater are within acceptable limits for potable use should the groundwater be extracted for such use in the future.

The SCR included a SL evaluation of soil vapor results, which included PCE and its breakdown products. Only trichloroethene (TCE) and PCE were detected in soil vapor and only PCE was detected above SLs. The SCR conducted screening using residential and commercial/industrial soil vapor screening levels (SVSLs) derived by applying a 0.001 soil attenuation factor to the DTSC Human and Ecological Risk Office (HERO) HHRA Note 3 indoor air SLs consistent with DTSC Vapor Intrusion (VI) Guidance (DTSC, 2011). DTSC has since adopted a more conservative attenuation factor of 0.03 (California Environmental Protection Agency [CalEPA], 2020) which reduced the SVSLs. Thus, additional evaluation of the potential for VI was recommended to further characterize the lateral and vertical extent of volatile organic compounds (VOCs) in soil gas in accordance with the requirements of the Corrective Action Consent Agreement, Docket Number HWCA P1-13/14-007 between SMUD and the DTSC.

E.1.2 Methodology

Current use of the Site is strictly for limited commercial and industrial purposes as most activities formerly conducted at the Site have either been transferred to other SMUD facilities or are no longer conducted by SMUD. Following remedial action for VOCs in soil vapor and arsenic in soil, SMUD's planned Site redevelopment includes a mix of residential and commercial/industrial uses compatible with existing uses in the local area.

The purpose of this assessment is to quantify risks to current and potential future human receptors from vapors in the subsurface that could migrate into air (indoor and outdoor). The human health risk evaluation followed federal and state guidance and is consistent with USEPA *Risk Assessment Guidance for Superfund, Volume 1, Human Health Evaluation Manual, Part A* (USEPA, 1989) and DTSC *Preliminary Endangerment Assessment Guidance Manual* (DTSC, 2015) and utilizes the USEPA (2020a) Vapor Intrusion Screening Levels (VISLs) and DTSC HERO HHRA Note 3 – DTSC-Modified SLs (DTSC, 2020).

The HHRA includes the sections listed below. The tables, figure, and attachments follow the text sections.

- **E.2 Conceptual Site Model:** Identifies sources, exposure pathways, and receptors.
- **E.3 Data Evaluation:** Summarizes the available data and how it was prepared for use in the risk assessment.
- **E.4 Screening Level Comparison:** Describes the comparison of maximum detected chemical concentrations, and method detection limits (MDLs) for non-detected chemicals, to screening levels.
- **E.5 Exposure Assessment:** Details the exposure pathways, the data, and exposure parameters used to evaluate each pathway.
- **E.6 Toxicity Assessment:** Presents the toxicity criteria used in the HHRA.
- **E.7 Risk Characterization:** Presents the calculate risk for each receptor.
- **E.8 Uncertainties:** Describes the factors that introduce key uncertainties to the risk calculations and how they qualify the results.
- **E.9 Conclusions**
- **E.10 References**

E.2 Conceptual Site Model

The conceptual site model (CSM) is a key tool in developing an understanding of contamination in relation to site conditions. It includes a schematic of how chemicals were released from sources; how they migrated to different media such as groundwater, soil, and air; and the pathways by which site receptors may be exposed to the contaminants (USEPA, 1989). The exposure pathway illustrates the movements of a chemical from its source to a potentially exposed population or individual, referred to as a receptor. Receptors are identified based on their locations relative to the site and source, their activity patterns, and the presence of potential sensitive subpopulations. An exposure pathway must be complete or exposure to site chemicals cannot occur.

A complete exposure pathway must have the following five elements:

1. A source (e.g., chemical releases and leaks/spills onto soil);
2. A mechanism for release and migration of chemical (e.g., infiltration into soil);
3. An environmental/physical transport and exposure medium (e.g., soil vapor);
4. An exposure point or site of potential contact (e.g., indoor air); and
5. A receptor and route of intake (e.g., direct contact by future residents).

If one or more elements are not present, the pathway is incomplete and there is no possibility of exposure. In some cases, the exposure pathway may be complete, but may be deemed insignificant due to site-specific factors and is therefore not a candidate for further quantitative evaluation. The CSM for the Site is provided in Figure 1.

The CSM is presented in Figure 1 and illustrates potential receptor scenarios and exposure routes. The SCR (AECOM, 2019) evaluated potential exposures to soil and groundwater. Current and future use of the Site has not changed; thus, no further evaluation of potential exposures to soil and groundwater are considered herein. As shown on the CSM, the exposure media evaluated herein is limited to soil vapors migrating into indoor and outdoor air. Exposure to Site-related chemicals in outdoor air is considered *de minimus* due to dilution and mixing with ambient (outdoor) air and was not quantified herein.

Site use is currently commercial/industrial and is expected to continue into the future until contaminant concentrations in soil vapor and soil are reduced to levels that will support unrestricted uses. Thus, this HHRA considered exposures to current and future commercial/industrial workers. Potentially complete exposure pathways include inhalation of outdoor air (although diluted and insignificant) and indoor air (VI pathway).

Considering future Site redevelopment may include residential uses in addition to commercial/industrial uses, hypothetical future residential use (i.e., unrestricted use scenario) was evaluated herein to assist with risk management decisions and are expected to have exposure to impacted outdoor air (although diluted and insignificant) and indoor air (VI pathway).

Future redevelopment of the Site may expose construction workers to VOCs in outdoor air while working in an excavation trench. No well-established models are available for estimating the migration of volatiles into an excavation trench. Exposure to volatiles is expected to be *de minimus* due to mixing with outdoor air. Thus, this potentially complete, yet insignificant, exposure pathway is not quantitatively evaluated herein. The evaluation does not consider potential off-Site impacts from VOC migration in the vadose zone.

E.3 Data Evaluation

The HHRA utilized soil vapor data collected in November and December 2020 and March 2021. Samples were collected from 45 locations from 4 to 5.5 feet below ground surface with six duplicates. Three soil vapor extraction system monitoring wells were included in the analysis (SVM-1, SVM-2, and SVM-3) from 4 to 5 feet bgs. Analytical

data used in the assessment are presented in Table E-1. All soil vapor data were considered usable in the risk assessment.

Duplicate sample pairs include samples SG-VW21A-01/-02, SG-VW24A-02/-03, SG-VW32A-01/-02, SG-VW41A-01/02, SG-VW50A-01/-02, and SG-VW53A-01/-02. Duplicate samples were processed as follows:

- If both samples were reported with detected concentrations of an analyte, the average concentration was used.
- If only one sample was reported with a detected analyte concentration, the detected concentration was used.
- If both samples were reported to have non-detect concentrations of an analyte, the average MDL was used.

General statistics (e.g., detection frequency, minimum and maximum detections, and locations) are presented for detected chemicals in Tables E-2a and E-2b.

Analytes detected in soil vapor include: 1,1,1,2-tetrafluoroethane, 1,1,1-trichloroethane (TCA), 1,1,2-trichloro-1,2,2-trifluoroethane, 1,1-difluoroethane, 1,2,4-trimethylbenzene, 1,2-dibromoethane (DBE), 1,2-dichloroethane (DCA), 1,2-dichloropropane (DCP), 1,3,5-trimethylbenzene, 1-ethyl-4-methylbenzene, 2-hexanone, acetone, benzene, bromodichloromethane (BDCM), carbon disulfide, carbon tetrachloride, chloroform, chloromethane, *cis*-1,2-dichloroethene (DCE), cyclohexane, dibromomethane, dichlorodifluoromethane, ethanol, ethylbenzene, hexane, isooctane, isopropyl alcohol, methyl ethyl ketone, methyl isobutyl ketone, methyl tertiary-butyl ether, naphthalene, n-heptane, o-xylene, p- & m-xylenes, total xylenes, propylene, styrene, t-butyl alcohol, PCE, tetrahydrofuran, toluene, total petroleum hydrocarbons (TPH), total petroleum hydrocarbons as gasoline (TPHg), *trans*-1,2-DCE, TCE, trichlorofluoromethane, and vinyl acetate.

E.4 Screening Level Comparison

The traditional forward risk calculations involve calculating the exposure point concentration (EPC) for each medium and then calculating a dose based on receptor-specific exposure factors that can be compared to published toxicity values for known health effects. Chemicals have two general modes of health effects, cancer and noncancer, and this approach results in cancer risks for carcinogens and noncancer hazards for noncarcinogens (USEPA, 1989). For cases when standard exposure conditions apply to all receptors, direct comparison to established SLs provides similar results. The DTSC HERO HHRA Note 3 and USEPA VISLs are comprehensive sets of SLs. Both sets of SLs are protective of human health that correspond to an excess lifetime cancer risk (ELCR) of 1E-06 (i.e., probability of one in one million) or noncancer hazard quotient (HQ) of 1 (the threshold or “safe dose”), based on federal (for VISLs) and California (HERO HHRA Note 3) input variables (e.g., exposure parameters, toxicity values).

The maximum detected chemical concentrations were compared to the minimum of the cancer and noncancer SLs. SLs were obtained from the DTSC HERO HHRA Note 3 – DTSC-Modified SLs (DTSC, 2020) or, if not established, the DTSC-adopted USEPA VISLs (USEPA, 2020a). SLs were based on a residential scenario using a target cancer risk of 1E-06 and a target noncancer hazard of 1.

SVSLs were back-calculated from indoor air SLs using two attenuation factors. Attenuation factors were selected as the default value (0.03) for sub-slab soil vapor to indoor air (USEPA, 2002 and DTSC, 2020) and the DTSC default value for existing commercial buildings for sub-slab soil vapor to indoor air (DTSC, 2011). SLs were calculated using the following equation:

$$SL_{sv} = SL_{ia} \div AF$$

Where:

SL_{sv} = screening level in soil vapor (microgram per cubic meter [$\mu g/m^3$])

SL_{ia} = screening level in indoor air ($\mu g/m^3$)

AF = attenuation factor (0.03 or 0.001; unitless)

Comparison to SVSLs for detected chemicals are presented in Table E-2a (0.03 attenuation factor) and Table E-2b (0.001 attenuation factor). A comparison of MDLs for non-detect chemicals to SVSLs are presented in Table E-2c (0.03 attenuation factor) and Table E-2d (0.001 attenuation factor). Non-detect chemicals with MDLs greater than SVSLs were not carried forward to the risk characterization and are discussed in Section E.8 (Uncertainties).

The detected chemical concentration comparison was performed to identify chemicals of potential concern (COPCs) (i.e., chemicals with concentrations greater than SVSLs). Comparison of maximum detected concentrations in site media to SLs are intended to screen entire sites, not for screening out individual chemicals from the risk assessment process (DTSC, 2020). If SLs are exceeded at a site, additional evaluation is warranted.

E.4.1 0.03 Attenuation Factor COPC Screening Results

Maximum detected concentrations of 1,2-DBE, benzene, BDCM, chloroform, ethylbenzene, naphthalene, and PCE were greater than SVSLs.

E.4.2 0.001 Attenuation Factor COPC Screening Results

Maximum detected concentrations of 1,2-DBE, chloroform, and PCE were greater than SLs.

E.5 Exposure Assessment

Characteristics at the Site do not warrant any site-specific modifications to the standard exposure parameters for commercial/industrial workers and residents used in the VISLs and HERO HHRA Note 3 levels. Therefore, the receptor risk was evaluated using the Sum of Ratios approach described in the USEPA Regional Screening Level (RSL) User's Guide (USEPA, 2020b) and DTSC (2020). The ratio of the chemical concentration to the SL may be used to calculate cancer risk and noncancer health hazard. The general equations used are as follows:

Chemical-Specific ELCR =

(Maximum Detected Concentration / Cancer Endpoint SL) x (1E-06)

Chemical-Specific Noncancer HQ =

Maximum Detected Concentration / Noncancer Endpoint SL

To calculate the cumulative ELCR for each receptor, the individual ELCR for all of the detected chemicals were summed. To calculate the hazard index (HI), the individual HQs were summed.

E.6 Toxicity Assessment

Toxicity data used in the derivation of SVSLs are obtained from the following sources. Values for DTSC are calculated when a more stringent value is selected (in comparison to USEPA). The toxicity data hierarchy for DTSC HERO HHRA Note 3 includes:

1. California Code of Regulations, Title 22, Division 4.5, sections 68400.5, 69020–69022 (“Toxicity Criteria for Human Health Risk Assessments, Screening Levels, and Remediation Goals”), effective September 4, 2018 – Office of Environmental Health Hazard Assessment (OEHHA) values meeting regulation requirements for peer-review and California-specific aspects (sensitive subpopulations considered).
2. USEPA Integrated Risk Information System
3. Other sources (e.g., USEPA Provisional Peer Reviewed Toxicity Values, Agency for Toxic Substances and Disease Registry (ATSDR), USEPA Superfund Health Effects Assessment Summary Table, etc.)

Toxicity data hierarchy for USEPA VISLs are as follows:

1. USEPA's Integrated Risk Information System
2. The Provisional Peer Reviewed Toxicity Values derived by USEPAs Superfund Health Risk Technical Support Center for the USEPA Superfund program.
3. USEPA's Office of Pesticide Programs Human Health Benchmarks for Pesticides.
4. The ATSDR minimal risk levels.
5. The California Environmental Protection Agency OEHHA provides toxicity values for the State of California.
6. Screening toxicity values in an appendix to certain provisional peer-reviewed toxicity value assessments.
7. The USEPA Superfund program's Health Effects Assessment Summary Table.

E.7 Risk Characterization

Tables E-3a and E-3b present the risk assessment results for the future residents and current and future commercial/industrial workers, respectively.

This section discusses the risk characterization process and the context by which the results should be considered. Results are presented considering the 0.03 and 0.001 attenuation factors.

The risk characterization is the presentation of the quantitative risk results with supporting definitions, context, and site applicability. Per USEPA (1991), a cancer risk of 1E-06 or less is considered *de minimis* risk (i.e., the probability of an individual developing cancer from this exposure is one in a million and may be interpreted as negligible or essentially cannot be differentiated from the background level of risk). A comparison of the one in a million cancer risk threshold to the current background risk for all types of cancer in the United States population of 1 in 2 (5E-01) for men and 1 in 3 (3E-01) for women (American Cancer Society, 2017) demonstrates the levels of protectiveness and conservatism of this threshold. A noncancer HI of less than 1 is also acceptable because the concentrations are cumulatively below harmful levels. USEPA (1991) uses the cancer risk range of 1E-04 to 1E-06 as a “target risk management range.” Risks in this range may be acceptable for risk management decisions, provided that site-related circumstances are present to mitigate the actual risks. A cancer risk greater than 1E-04 typically warrants some type of action.

The calculated risks and hazards are estimates and are based on intentionally conservative exposure scenarios and toxicity values. This HHRA utilizes standard (intentionally conservative) exposure scenarios. Exceedance of any particular risk or hazard level does not imply that adverse health effects have already occurred or will occur. The estimates are merely an indication that additional evaluation or action may be warranted.

E.7.1 Soil Vapor Exposure Risk Summary

In the following sections, risks from soil vapor exposures at the Site are presented for hypothetical future residents and current and future commercial/industrial workers using 0.03 and 0.001 attenuation factors. A summary of estimated potential cancer risks and noncancer hazards and primary risk contributors are presented in Table E-4.

E.7.1.1 Hypothetical Future Resident Results

0.03 Attenuation Factor Results. The estimated potential cumulative cancer risk for the hypothetical future resident exposed to chemicals detected in soil vapor was greater than the USEPA acceptable risk range; the estimated cumulative cancer risk was 2E-02. Risks were driven by the presence of PCE (2.1E-02), TCE (9.4E-04), chloroform (3.4E-04), 1,2-DBE (3.3E-05), 1,2-DCP (2.4E-05), benzene (1.2E-05), BDCM (9.5E-06), naphthalene (2.5E-05), and ethylbenzene (1.8E-06).

The estimated noncancer HI was greater than to the threshold value of 1; the HI was 578. Hazards were driven by the presence of TCE (215), PCE (229), *cis*-1,2-DCE (127), and 1,2-DCP (4.3).

0.001 Attenuation Factor Results. The estimated potential cumulative cancer risk for the hypothetical future resident exposed to chemicals detected in soil vapor was greater than the USEPA acceptable risk range; the estimated cumulative cancer risk was 7E-04. Risks were driven by the presence of PCE (7.0E-04), TCE (3.1E-05), chloroform (1.1E-05), and 1,2-DBE (1.1E-06).

The estimated noncancer HI was greater than the threshold value of 1; the HI was 19. Hazards were driven by the presence of PCE (7.6), TCE (7.2), and *cis*-1,2-DCE (4.2).

E.7.1.2 Current and Future Commercial/Industrial Worker

0.03 Attenuation Factor Results. The estimated potential cumulative cancer risk for the current and future commercial/industrial worker exposed to chemicals detected in soil vapor was greater than the USEPA acceptable risk range; the estimated cumulative cancer risk was 5E-03. Risks were driven by the presence of PCE (4.8E-03), TCE (1.5E-04), chloroform (7.8E-05), 1,2-DBE (7.6E-06), naphthalene (5.8E-06), 1,2-DCP (5.5E-06), benzene (2.8E-06), and BDCM (2.2E-06).

The estimated noncancer HI was greater than to the threshold value of 1; the HI was 136. Hazards were driven by the presence of PCE (53.3), TCE (51.7), and *cis*-1,2-DCE (29.2).

0.001 Attenuation Factor Results. The estimated potential cumulative cancer risk for the current and future commercial/industrial worker exposed to chemicals detected in soil vapor was greater than the USEPA acceptable risk range; the estimated cumulative cancer risk was 2E-04. Risks were driven by the presence of PCE (1.6E-04), TCE (5.0E-06), and chloroform (2.6E-06).

The estimated noncancer HI was greater than the threshold value of 1; the HI was 5. Hazards were driven by the presence of PCE (1.8) and TCE (1.7).

E.8 Uncertainties

A risk assessment involves the bringing together of multiple data sources, conservative exposure scenarios, current science in the form of toxicity data and site characteristics to quantify receptor risk within the conceptual site model. Each component brings with it inherent uncertainties that may over- or under-estimate risk, which should be weighed with the overall risk results. The following are key site-specific topics that may contribute uncertainty within the risk assessment process of this HHRA.

E.8.1 Non-detect Chemicals with Elevated Detection Limits

A large range of MDLs were reported for a number of chemicals and the majority of MDLs for most of these chemicals are below SVSLs. The uncertainty associated with the relatively few MDLs that are above SVSLs potentially under-estimates risk for the VI pathway, but any potential contribution would be minor as MDLs are

estimates of potential concentrations between zero and the MDL. An evaluation was performed of the occurrence of medium-specific results reported as non-detect, but with MDLs that exceeded the respective SLs. Analytes reported as non-detect may be present at concentrations somewhere between zero and the MDL. To evaluate the possibility that risks and hazards associated with these chemicals would be underestimated in the HHRA, non-detect results were compared to SVSLs at the MDL. Frequency of MDL exceedances are detailed in Tables E-2c and E-2d. The sections below detail MDL exceedances and the frequency of these exceedances (number of MDL exceedances / number of non-detect results).

E.8.1.1 0.03 Attenuation Factor MDL Evaluation Results

As presented in Table E-2c, 31 chemicals had MDLs greater than SVSLs (attenuation factor of 0.03) at a frequency ranging from 2 percent (%) to 100%. 1,1,1,2-Tetrachloroethane, 1,2,4-trichlorobenzene, 1,2-DCP, 1,4-dichlorobenzene, 1,4-dioxane, allyl chloride, bromoform, carbon tetrachloride, methylene chloride, TCE, and vinyl bromide had MDLs exceeding SVSLs at a frequency less than 10%. 1,1,2,2-Tetrachloroethane, 1,3-butadiene, acrylonitrile, benzene, benzyl chloride, BDCM, chloroform, ethylbenzene, hexachlorobutadiene, naphthalene, and PCE had MDLs exceeding SVSLs at a frequency ranging from 10% to 25%. 1,2,3-Trichloropropane (TCP), 1,2-dibromo-3-chloropropane, 1,2-DBE, acrolein, and vinyl chloride had MDLs exceeding SVSLs at a frequency of 100%.

Of chemicals that were not detected in soil vapor, 20 chemicals had MDLs exceeding SVSLs. These chemicals include 1,1,1,2-tetrachloroethane, 1,1,2,2-tetrachloroethane, 1,1,2-TCA, 1,2,3-TCP, 1,2,4-trichlorobenzene, 1,2-dibromo-3-chloropropane, 1,3-butadiene, 1,4-dichlorobezene, 1,4-dioxane, acrolein, acrylonitrile, allyl chloride, benzyl chloride, bromoform, dibromochloromethane, hexachlorobutadiene, hexachloroethane, methylene chloride, vinyl bromide, and vinyl chloride.

1,2-DBE, 1,2-DCA, BDCM, carbon tetrachloride, and naphthalene had maximum MDLs greater than the maximum detected concentrations. These chemicals were evaluated using detected concentrations in soil vapor in the HHRA; however, the elevated detection limits (between zero and the MDL) represent an area of uncertainty in this assessment.

E.8.1.2 0.001 Attenuation Factor MDL Evaluation Results

As presented in Table E-2d, nine chemicals had MDLs greater than SVSLs (attenuation factor of 0.001) at a frequency ranging from 4% to 100%. 1,1,2,2-Tetrachloroethane, 1,2-DBE, 1,3-butadiene, acrolein, hexachlorobutadiene, naphthalene, and vinyl chloride had MDLs exceeding SVSLs at a frequency of 10% or less. 1,2,3-TCP and 1,2-dibromo-3-chloropropane had MDLs exceeding SVSLs at a frequency of 100%.

Of chemicals that were not detected in soil vapor, seven chemicals had MDLs exceeding SVSLs. These chemicals include 1,1,2,2-tetrachloroethane, 1,2,3-TCP, 1,2-dibromo-3-chloropropane, 1,3-butadiene, acrolein, hexachlorobutadiene, and vinyl chloride.

1,2-DBE and naphthalene had maximum MDLs greater than the maximum detected concentrations. These chemicals were evaluated using detected concentrations in soil vapor in the HHRA; however, the elevated detection limits (between zero and the MDL) represent an area of uncertainty in this assessment.

E.8.2 Limitations of the Dataset

Soil vapor data density ideally should provide adequate coverage of the smallest building footprint anticipated for the future receptors evaluated. The soil vapor sampling at the Site was well distributed to provide sufficient coverage for individual site assessment. Elevated risks were identified based on the maximum detected concentrations of the limited soil vapor dataset and therefore likely over-estimates VI risks.

The Site is larger than any future development building footprint (19.74 acres). Use of the maximum detected concentration, regardless of the location of the sample, results in a conservative estimate of potential risks. Maximum detected concentrations of individual chemicals were not always reported at the same location. Thus, risks are likely to be over-estimated.

In order to limit uncertainty associated with such a large site, point risk estimates were developed for each receptor scenario using each attenuation factor to evaluate if portions of the Site exhibit no unacceptable risks and/or hazards. For each sample location, risks and hazards were calculated using the methodology detailed above in Section E.5. The general equations used are as follows:

Chemical-Specific ELCR =

(Maximum Detected Concentration / Cancer Endpoint SL) x (1E-06)

Chemical-Specific Noncancer HQ =

Maximum Detected Concentration / Noncancer Endpoint SL

To calculate the cumulative ELCR and HI for each receptor, the individual chemical risks and hazards were summed at each sample location. Non-detect results were not included in point risk estimates. Point risk estimates are detailed in Table E-5a (Resident Attenuation Factor 0.03), Table E-5b (Resident Attenuation Factor 0.001), Table E-5c (Commercial Worker Attenuation Factor 0.03), and Table E-5d (Commercial Worker Attenuation Factor 0.001). Point risk estimates are displayed visually in SCR Addendum Figure 5-1 (Resident Attenuation Factor 0.03), Figure 5-2 (Resident Attenuation Factor 0.001), Figure 5-3 (Commercial Worker Attenuation Factor 0.03), and Figure 5-4 (Commercial Worker Attenuation Factor 0.001).

E.8.2.1 Resident Result Attenuation Factor 0.03

Point risk estimates are summarized in Table E-5a and presented in SCR Addendum Figure 5-1. Potentially unacceptable risks and/or hazards were calculated for the majority of sample locations for future residents (attenuation factor 0.03), distributed across the Site. No unacceptable risks were calculated at locations VW37, VW42, VW43, VW46, VW47, and SVM-2.

The majority of unacceptable risks and hazards were driven by the presence of benzene, chloroform, 1,2-DBE, PCE, TCE, toluene, and naphthalene.

E.8.2.2 Resident Result Attenuation Factor 0.001

Point risk estimates are summarized in Table E-5b and presented in SCR Addendum Figure 5-2. Potentially unacceptable risks and/or hazards were calculated for locations VW19 (cancer risk), VW24 (cancer risk), VW30 (cancer risk), VW48 (cancer risk), and SVM-1 (cancer risk and noncancer hazard).

Potentially unacceptable risks and hazards were driven by the presence of PCE, TCE, and chloroform.

E.8.2.3 Commercial Worker Attenuation Factor 0.03

Point risk estimates are summarized in Table E-5c and presented in SCR Addendum Figure 5-3. Potentially unacceptable risks and/or hazards were calculated for locations in the northern portion of the North Corporation Yard (VW16 through VW19, VW21 through VW27, VW29, VW30, VW44, VW45, VW52, and VW54. Locations in the southern portion of the North Corporation Yard were limited to VW34 through VW36, VW48, and SVM-1.

Potentially unacceptable risks and hazards were driven by the presence of benzene, chloroform, 1,2-DBE, PCE, TCE, and naphthalene.

E.8.2.4 Commercial Worker Attenuation Factor 0.001

Point risk estimates are summarized in Table E-5d and presented in SCR Addendum Figure 5-4. Potentially unacceptable risks and/or hazards were calculated for two locations: SVM-1 and VW30.

Potentially unacceptable risks and hazards were driven by the presence of chloroform, PCE, and TCE.

E.8.3 Chemical-Specific Considerations

BDCM, chloroform, and two other trihalomethanes: dibromochloromethane and bromoform are disinfection by-products commonly produced during the chlorination of water and wastewater and their presence in soil vapor (migrating from leaking pipes in the vadose zone or from underlying groundwater) may be intentional or inadvertent (Ivahnenko and Zogorski, 2006). The presence of these compounds in soil vapor may not be the result of Site-related activities. Thus, risks from these compounds due to Site-related activities may be overestimated.

E.8.4 Estimated Concentrations

In some instances, data were qualified with 'J' flags indicating estimated concentrations. This qualifier indicates that the measured concentration is lower than the MRL but greater than the MDL. Although the analyte is present in the sample, the concentration is an estimate and represents an area of uncertainty in this assessment.

Maximum detected concentrations of 1,2-DBE and 1,2-DCP were J flag results reported in concentrations greater than SLs. 1,2-DBE was detected in three samples and all were J flag results. 1,2-DCP was detected in one sample with a J flag result. These chemicals were identified as risk drivers in this assessment based on estimated results and risk estimates may be overestimated.

E.9 Conclusions

This risk assessment was conducted using a dual method approach utilizing two soil vapor to indoor air attenuation factors (0.03 and 0.001). The results of each method were similar, with the 0.03 attenuation factor risk numbers slightly higher due to a more conservative attenuation factor. A summary of results is provided in Table E-4.

Soil vapor exposure for the Site was evaluated using the maximum detected concentrations, which represent a general worse-case scenario. PCE, TCE, chloroform, and *cis*-1,2-DCE were the primary risk drivers yielding unacceptable risks and hazards for hypothetical future residents. Additional chemicals contributing to unacceptable risks and hazards for hypothetical future residents included 1,2-DBE, 1,2-DCP, benzene, BDCM, ethylbenzene, naphthalene, and toluene. PCE, TCE, and *cis*-1,2-DCE were the primary risk drivers yielding unacceptable risks and hazards for current and future commercial/industrial workers. Additional chemicals contributing the unacceptable risks and hazards for current and future commercial/industrial workers included chloroform, 1,2-DBE, 1,2-DCP, benzene, BDCM, and naphthalene.

Notes:
µg/m³ =- microgram per cubic meter
Conc = concentration
FD = field duplicate
ID = identification
J = estimated concentration
J- = estimated concentration, low bias
N - normal sample
Qual - laboratory qualifier
U - nondetect result
UJ - nondetect result, estimated concentration

Notes:
µg/m³ =- microgram per cubic meter
Conc = concentration
FD = field duplicate
ID = identification
J = estimated concentration
J- = estimated concentration, low bias
N - normal sample
Qual - laboratory qualifier
U - nondetect result
UJ - nondetect result, estimated concentration

Notes:
µg/m³ =- microgram per cubic meter
Conc = concentration
FD = field duplicate
ID = identification
J = estimated concentration
J- = estimated concentration, low bias
N - normal sample
Qual - laboratory qualifier
U - nondetect result
UJ - nondetect result, estimated concentration

Notes:
µg/m^3 =- microgram per cubic meter
Conc = concentration
FD = field duplicate
ID = identification
J = estimated concentration
J- = estimated concentration, low bias
N - normal sample
Qual - laboratory qualifier
U - nondetect result
UJ - nondetect result, estimated concentration

Notes:

Shading denotes a chemical selected as a COPC

All concentrations provided in units of microgram per cubic meter

> = greater than

-- = not available

CAS = Chemical Abstracts Service

COPC = chemical of potential concern

DTSC = California Department of Toxic Substances Control

Max = maximum

NA = not applicable

USEPA = United States Environmental Protection Agency

VISL = Vapor Intrusion Screening Level

(1) Concentration used for screening selected as the maximum detected concentration.

(2) Risk-based screening level for a residential exposure scenario assuming an attenuation factor of 0.03 (risk-based screening level for indoor air / 0.03). Risk-based screening levels

Notes:

Shading denotes a chemical selected as a COPC

All concentrations provided in units of microgram per cubic meter

> = greater than

-- = not available

CAS = Chemical Abstracts Service

COPC = chemical of potential concern

DTSC = California Department of Toxic Substances Control

Max = maximum

NA = not applicable

USEPA = United States Environmental Protection Agency

VISL = Vapor Intrusion Screening Level

(1) Concentration used for screening selected as the maximum detected concentration.

(2) Risk-based screening level for a residential exposure scenario assuming an attenuation factor of 0.001 (risk-based screening level for indoor air / 0.001). Risk-based screening levels obtained from DTSC Hero Note 3 (DTSC, 2020) or, if unavailable, USEPA VISLs (USEPA, 2020) and are based on a target cancer risk of 1E-06 and a target hazard of 1.

Notes:

Shading denotes a chemical with an MDL greater than the screening level

All concentrations provided in units of microgram per cubic meter

-- = not available

CAS = Chemical Abstracts Service

COPC - chemical of potential concern

DTSC = California Department of Toxic Substances Control

MDL = method detection limit

NA = not applicable

USEPA = United States Environmental Protection Agency

VISL = Vapor Intrusion Screening Level

(1) Concentration used for screening selected as the maximum detection limt.

(2) Risk-based screening level for a residential exposure scenario assuming an attenuation factor of 0.03 (risk-based screening level for indoor air / 0.03). Risk-based screening levels obtained from DTSC Hero Note 3 (DTSC, 2020) or, if unavailable, USEPA VISLs (USEPA, 2020) and are based on a target cancer risk of 1E-06 and a target hazard of 1.

(3) Chemical selected as a COPC if the MDL is greater than the screening level.

Notes:

Shading denotes a cumulative cancer risk greater than 1E-06 or a noncancer hazard index greater than 1.

$\mu g/m^3$ = microgram per cubic meter

-- = not applicable/available

AF = attenuation factor

CAS = Chemical Abstracts Service

DTSC = California Department of Toxic Substances Control

USEPA = United States Environmental Protection Agency

VISL = Vapor Intrusion Screening Level

(1) Risk-based screening level for a residential exposure scenario assuming an attenuation factor of 0.03 (risk-based screening level for indoor air / 0.03).

(2) Risk-based screening level for a residential exposure scenario assuming an attenuation factor of 0.001 (risk-based screening level for indoor air / 0.001).

(3) Risk-based screening levels obtained from DTSC Hero Note 3 (DTSC, 2020) or, if unavailable, USEPA VISLs (USEPA, 2020) and are based on a target cancer risk of 1E-06 and a target noncancer hazard of 1.

(4) Estimated potential cancer risk and noncancer hazards calculated as:

$$Cancer\ Risk\ or\ Noncancer\ Hazard\ = \frac{MDC}{SL} \times TR\ or\ THQ$$

where: MDC = Maximum detected concentration (microgram per cubic meter)
SL = Risk-based screening level (microgram per cubic meter)
TR = Target risk (1E-06)
THQ = Target hazard quotient (1.0)

(5) Risks and hazards only calculated for chemicals detected in one or more samples.

			Estimated Cumulative Cancer Risk	5E-03	**Estimated Hazard Index**	136	**Estimated Cumulative Cancer Risk**	2E-04	**Estimated Hazard Index**	5

Notes:

Shading denotes a cumulative cancer risk greater than 1E-06 or a noncancer hazard index greater than 1.

$\mu g/m^3$ = microgram per cubic meter

-- = not applicable/available

AF = attenuation factor

CAS = Chemical Abstracts Service

DTSC = California Department of Toxic Substances Control

USEPA = United States Environmental Protection Agency

VISL = Vapor Intrusion Screening Level

(1) Risk-based screening level for a commercial worker exposure scenario assuming an attenuation factor of 0.03 (risk-based screening level for indoor air / 0.03).

(2) Risk-based screening level for a commercial worker exposure scenario assuming an attenuation factor of 0.001 (risk-based screening level for indoor air / 0.001).

(3) Risk-based screening levels obtained from DTSC Hero Note 3 (DTSC, 2020) or, if unavailable, USEPA VISLs (USEPA, 2020) and are based on a target cancer risk of 1E-06 and a target noncancer hazard of 1.

(4) Estimated potential cancer risk and noncancer hazards calculated as:

$$Cancer\ Risk\ or\ Noncancer\ Hazard\ = \frac{MDC}{SL} \times TR\ or\ THQ$$

where: MDC = Maximum detected concentration (microgram per cubic meter)
SL = Risk-based screening level (microgram per cubic meter)
TR = Target risk (1E-06)
THQ = Target hazard quotient (1.0)

(5) Risks and hazards only calculated for chemicals detected in one or more samples.

TABLE E-4. SUMMARY OF CUMULATIVE RISK AND HAZARD RESULTS

	Attenuation Factor 0.03 (1)			Attenuation Factor 0.001 (1)		
Receptor	Potential Estimated Cumulative Cancer Risk	Potential Estimated Noncancer Hazard Index	Primary Risk Contributors (2)	Potential Estimated Cumulative Cancer Risk	Potential Estimated Noncancer Hazard Index	Primary Risk Contributors (2)
Resident	2E-02	578	1,2-DBE, benzene, BDCM, chloroform, cis-1,2-DCE, ethylbenzene, naphthalene, PCE, TCE, and toluene	7E-04	19	1,2-DBE, cis-1,2-DCE, chloroform, PCE, and TCE
Commercial Worker	5E-03	136	1,2-DBE, 1,2-dichloropropane, benzene, BDCM, cis-1,2-DCE, chloroform, naphthalene, PCE, and TCE	2E-04	5	Chloroform, PCE, and TCE

Notes:

Shading denotes a cumulative cancer risk greater than 1E-06 or a noncancer hazard index greater than 1.

Cancer risks and noncancer hazards are shown to one significant figure.

BDCM = bromodichloromethane

DBE = dibromoethane

DCE = dichloroethene

NA = not applicable

PCE = tetrachloroethene

TCE = trichloroethene

(1) Cumulative risks and hazards calculated for each receptor exposure scenario (see Tables E-3A and E-3B) using attenuation factors of 0.03 and 0.001.

(2) Primary risk contributors were identified as chemicals contributing to a cumulative cancer risk greater than 1E-06 or noncancer hazard index greater than 1 for a receptor exposure scenario.

Notes:

ND = nondetect

All results are from November or December 2020 unless noted otherwise.
When two sets of results are presented for a given location, the higher estimated risk or hazard was selected for that location.
Cancer risk and noncancer hazard calculated using the formula:

$$Cancer\ Risk\ or\ Noncancer\ Hazard\ = \frac{MDC}{SL} \times TR\ or\ THQ$$

where: MDC = Maximum detected concentration (microgram per cubic meter)
SL = Risk-based screening level (microgram per cubic meter)
TR = Target risk (1E-06)
THQ = Target hazard quotient (1.0)

(1) Noncancer hazard estimate for a residential exposure scenario assuming an attenuation factor of 0.03 (risk-based screening level for indoor air / 0.03) and a target noncancer hazard of 1.
(2) Cancer risk estimate for a residential exposure scenario assuming an attenuation factor of 0.03 (risk-based screening level for indoor air / 0.03) and a target cancer risk of 1E-06.
(3) Cumualtive risk and hazards summed for each sample location.

Notes:
ND = nondetect
All results are from November or December 2020 unless noted otherwise.
When two sets of results are presented for a given location, the higher estimated risk or hazard was selected for that location.
Cancer risk and noncancer hazard calculated using the formula:

$$Cancer\ Risk\ or\ Noncancer\ Hazard\ = \frac{MDC}{SL} \times TR\ or\ THQ$$

where: *MDC = Maximum detected concentration (microgram per cubic meter)*
SL = Risk-based screening level (microgram per cubic meter)
TR = Target risk (1E-06)
THQ = Target hazard quotient (1.0)

(1) Noncancer hazard estimate for a residential exposure scenario assuming an attenuation factor of 0.001 (risk-based screening level for indoor air / 0.001) and a target noncancer hazard of 1.
(2) Cancer risk estimate for a residential exposure scenario assuming an attenuation factor of 0.001 (risk-based screening level for indoor air / 0.001) and a target cancer risk of 1E-06.
(3) Cumualtive risk and hazards summed for each sample location.

Notes:

ND = nondetect

All results are from November or December 2020 unless noted otherwise.

When two sets of results are presented for a given location, the higher estimated risk or hazard was selected for that location.

Cancer risk and noncancer hazard calculated using the formula:

$$Cancer\ Risk\ or\ Noncancer\ Hazard\ = \frac{MDC}{SL} \times TR\ or\ THQ$$

where: *MDC = Maximum detected concentration (microgram per cubic meter)*
SL = Risk-based screening level (microgram per cubic meter)
TR = Target risk (1E-06)
THQ = Target hazard quotient (1.0)

(1) Noncancer hazard estimate for a commercial worker exposure scenario assuming an attenuation factor of 0.03 (risk-based screening level for indoor air / 0.03) and a target noncancer hazard of 1.

(2) Cancer risk estimate for a commercial worker exposure scenario assuming an attenuation factor of 0.03 (risk-based screening level for indoor air / 0.03) and a target cancer risk of 1E-06.

(3) Cumualtive risk and hazards summed for each sample location.

Notes:
ND = nondetect
All results are from November or December 2020 unless noted otherwise.
When two sets of results are presented for a given location, the higher estimated risk or hazard was selected for that location.
Cancer risk and noncancer hazard calculated using the formula:

$$Cancer\ Risk\ or\ Noncancer\ Hazard\ = \frac{MDC}{SL} \times TR\ or\ THQ$$

where: MDC = Maximum detected concentration (microgram per cubic meter)
SL = Risk-based screening level (microgram per cubic meter)
TR = Target risk (1E-06)
THQ = Target hazard quotient (1.0)

(1) Noncancer hazard estimate for a commercial worker exposure scenario assuming an attenuation factor of 0.001 (risk-based screening level for indoor air / 0.001) and a target noncancer hazard of 1.
(2) Cancer risk estimate for a commercial worker exposure scenario assuming an attenuation factor of 0.001 (risk-based screening level for indoor air / 0.001) and a target cancer risk of 1E-06.
(3) Cumualtive risk and hazards summed for each sample location.
