

2020 Clean Energy Power Sources

Generation capacity and equivalent # of homes powered by source

Key

- Solar
- Wind
- Hydro
- Biomass
- Geothermal

GWh - 1 hour of electricity production at a rate of 1,000 megawatts (MW).

of homes powered – based on 750 kWh/mo. average household electricity use. Resources may not match customer demand due to daily/hourly weather fluctuations (wind/solar) and seasons (hydro).
