Transportation Electrification (TE) Advisory Services

SMUD eFuelSM Services

SMUD is offering a new program that will deliver a no-cost, customized analysis of your business's electric transportation future. SMUD will prioritize businesses with fleet vehicles and employee parking as well as multifamily dwellings.

If your organization is ready to move forward with an EV charging installation, SMUD will also facilitate the installation of "electric fuel" solutions for qualifying customers. This installation service removes key barriers of vehicle electrification by offering SMUD's technical expertise, project management experience and bulk pricing. Your business would receive the no- or low-cost installation in exchange for a monthly fee on a SMUD bill.

Complete this form and email to CommercialEV@smud.org to be added to our waitlist for no-cost transportation electrification advisory services by SMUD and its partners. These services will be available to customers starting in September 2021.
