

Go Electric Business Rebates | Heat Pump Space Heating and Cooling

Projects that replace gas-fired systems with efficient electric heat pump equipment are eligible for rebates.

Qualifying Rebates	Measure (new unit description)	Rebate
	Inverter driven variable capacity mini-split heat pump (1-5 tons) Electrical infrastructure improvement incentive Permitting and engineering support incentive	\$500/ton of cooling \$1,000/unit \$750/project
	Packaged and split system heat pump (3-20 tons) Electrical infrastructure improvement incentive Permitting and engineering support incentive	\$550/ton of cooling \$2,000/unit \$750/project
	Variable refrigerant flow (VRF) heat pump Electrical infrastructure improvement incentive Permitting and engineering support incentive	\$1,000/ton of cooling \$1,000/unit \$750/project
	Heat recovery chiller or custom-engineered heat pump for hydronic service Customized engineered air to air heat pump HVAC system, hybrid gas-electric systems	\$3,000/ton or \$0.30/kWh-e (whichever is higher) Contact SMUD for custom calculations

What's eligible?

- SMUD commercial customers on a commercial billing rate
- Heat pumps (included in measures listed above) that meet minimum Title 24 efficiencies qualify

How to apply?

- Submit application [online](https://smud.org/MyAccount) at smud.org/MyAccount
- Submit a photo of the existing gas equipment including the nameplate as well as a photo of the new equipment including the nameplate once installed
