Residential SolarShares® Prospective Product Content Label¹

Residential SolarShares launched in January of 2024 and is sold by matching an estimated percentage of your usage annually. The information provided only applies to the portion of your SMUD bill covered by SolarShares. In 2024, Residential SolarShares is projected to be made up of the following new renewable resources averaged annually.

Green-e® Energy Eligible New Renewables² in Residential SolarShares

	2024 Prospective		
	%	Generation Location	
Solar	100%	CA	
Total Green-e® Energy Certified New Renewables	100%	CA	

- 1. Prospective figures reflect forecasted renewables. We will report the actual resource mix of the electricity you purchased annually in the form of a Historical Product Content Label in 2024. These figures will reflect the power delivered to Residential SolarShares customers in 2024. Residential SolarShares launched in January of 2024.
- 2. New Renewables come from generation facilities that first began commercial operation within the past 15 years.
- * For comparison, the current average mix of resources supplying SMUD in 2023 includes: Eligible Renewable (45.0% (Biomass & Biowaste 3.1%, Geothermal 14.7%, Eligible Hydroelectric 2.0%, Solar 10.9%, Wind 14.4%)), Coal (0.0%), Large Hydroelectric (32.6%), Natural Gas (21.9%), Nuclear (0.3%), Other (0.0%), Unspecified Sources of Power (0.1%). This resource mix was prepared in accordance with CEC energy almanac available at: SMUD 2023 Power Content Label

In 2023, the average home in SMUD's territory used approximately 700 kWh per month. [Source: <u>SMUD's 2023 5-Year Financial Summary</u>].
